

Report of the 3rd Workshop for Young Researchers in Cement and Concrete Technology

2-3 Nov 2023, Bahía Blanca, Argentina

The [3rd Workshop for Young Researchers in Cement and Concrete Technology](#) was an excellent event organised and hosted by the "Universidad Nacional del Sur". The event had two plenary lectures given by:

- Prof. Sylvia Kessler-Keßler, Helmut Schmidt University, Germany, presenting "Corrosion of reinforcement of concrete structures - evaluation of the corrosion state", and
- Dr. Carlos Milanesi, Cementos Avellaneda S. A., Argentina, presenting "Considerations on the predictive capacity of some models used in cement and concrete technology".

The best 2 contributions received a 1-year free RILEM membership. Congratulations to:

- LUISINA ARISTARÁN, CIFICEN –Argentina, presenting "Mortars made with hydraulic lime and calcined clays. Analysis of environmental CO₂ capture, physicochemical, mechanical and biological properties", and
- CECILIA MARTINEFSKY, CIFICEN –Argentina, presenting "Sawdust as a pore-forming agent in the production of lightweight aggregates".

As part of the program of the event, the delegates were treated with a visit to the port of Bahía Blanca. Here come a few pictures of the event:
